

DIGITAL CAMERA AND MOBILE EQUIPMENT WITH  
PHOTOGRAPHING AND DISPLAYING FUNCTION

ABSTRACT OF THE DISCLOSURE

5

Adigital camera has a display processor, a release button,  
and a button operation detector. The display processor  
displays an object image on a screen as a moving-image before  
photographing a still-image. The release button is operated  
10 for recording the still-image. The button operation detector  
detects the contact of a finger with the release button. The  
display processor superimposes photograph information on the  
moving image when the button operation detector detects the  
contact.
